FEATURES OF THE NEW HIEBERT HOIST

- Lifts the frame of your equipment - allows tire and axle removal. Also more solid for working on.
- Moveable - the **Hiebert Hoist** is lightweight, operates on 120V and can be moved wherever it is needed.
- Equipment is open from **all** sides including the underside - this hoist is *almost* never in the way.
- Safety system that works at any height - work with confidence underneath your equipment.
- User friendly - Frequently used job tools are held within easy access tool trays that are removable. Engine swing arm allows for easy engine removal and to swing it out front for service or load for delivery.
- Adaptable - the **Hiebert Hoist** can be used for a large variety of equipment with different sizes coupled with factory approved lift adapters including ATV's, riding & walk behind mowers, golf cars, snowmobiles and more.
- Cost effective - this hoist will pay for itself 3 ways.
 - Improved working environment for mechanics by making tough jobs easier on the body.
 - Professional equipment makes it obvious to the customer why they would bring their machinery in for service.
 - Probably the biggest payback is in the time saved. Jobs (or warranty claims) billed on manufacturers allowed time can be done in 30% less time and in some cases it has been as much as half
- Another cost effective use for the wheel model is for large machine maintenance, such as removing large rollers or moving parts from one level to another - saving the need for a dedicated forklift.
- Simple - several years of design and use have gone into this design to make it adaptable to multiple applications and sizes without having to redesign the whole machine.
